Submersible Drainage Pumps

# KTV/KTVE KRS

# Compact, sturdy, and powerful submersible pumps Ideal for the most demanding construction jobs

Pumps must have solid structure, operate safe and easy, and offer high mobility. Now, you'll have to cap each of these attributes with the word "extra" when it comes to drainage pumps for construction work.

Tsurumi has done it - not in word but in deed.

Deliberately arranging on-the-job requirements in product design

Tsurumi has built a new series of extra powerful submersible pumps which ideally matches any demanding draining jobs.

Each and every one of these products which represent Tsurumi's years of pump-making expertise has been hallmarked through daily work at many construction sites in the world.

## Oil Lifter (Patented)

This Oil Lifter was developed to improve quality and reliability of our submersible pump by enhancing sealing performance of the mechanical

- \* The Oil Lifter is a lubrication device for the mechanical seal that is the heart of the submersible pump.
- \* The Oil Lifter stabilizes and enhances mechanical seal lubrication and cooling effect.
- Offers stable sealing performances even if the oil level drops. Facilitates periodic inspection.

Oil Lifter

#### Submersible Semi-vortex Drainage Pumps

for General Construction Work 2-pole Motor Series

# **Compact**

The height has been reduced by a maximum of 181 mm (133 mm for KTV 2-15 and KTV 2-37) from Tsurumi's conventional equivalents by eliminating unnecessary room in the motor and the pump. These pumps are the smallest in this class in the industry.

## Lightweight

Pump materials have been changed in part to die-cast aluminum and specially treated synthetic rubber. This has reduced the weight of all models in this series by more than 10 kg compared with Tsurumi's conventional pumps of the same type. An ergonomically devised handle facilitates the relocation of the pump at a construction site.

## Rugged

The die-cast aluminum part is protected with the casing, wearing plate, and duct sleeve, all made of specially prepared synthetic rubber. This has resulted in amazingly increased resistance to wear and in the following additional virtues.

- Greatly reduced maintenance service intervals
- A pump immune to calcium carbonate deposits or scale; if any, readily removed.
- No clogging, thanks to the semi-vortex flow construction.

Low maintenance

The pump's lower part can be disassembled with a box wrench to facilitate maintenance services.

Lower part is disassembled with a box wrench for effortless maintenance without impeller removal

# **KRS**

#### Submersible Drainage Pumps

for General Construction Work 4-pole Motor Series

KRS-series, another cast iorn pumps with 4-pole motor, represent Tsurumi's multipurpose pumps for their simple construction, superb durability, and high efficiency. Tsurumi's years of expertise and innovative techniques are fully utilized in every component of these pumps which have own user's unparalleled credit and admiration.

Use of new materials has resulted in the most lightweight pumps compared with conventional equivalents.

Excellent durability secured by Tsurumi's long pump-making experience renders these pumps multipurpose ranging from construction work to installation in facilities.

S.S. Revolution 3000 min<sup>-1</sup>

#### Probe type automatic pump (KTVE model)

Unit is turned on/off by probe-type water level sensor to prevent draught water flow when the water level drops. Enhances durability of the pump itself by reducing radical part wear while saving energy.
